## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-12 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-9 of U.S. Patent No. 6,72(4),538 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because the claimed transparent light guide plate having a first major surface and second major surface in which a light guide plate is positioned to face the driver in front of a sight line of the driver and that the light guide plate tilts rearward while a light entrance end plane comes at the bottom and a light emission end plane comes at the top; and at least one luminous element placed on the entrance end plane of the light guide plate is broader terminology that is inherent to the claimed head-up display in of U.S. Patent No. 6,72(4),538 B2 that details that a display for the driver includes a visual field for a driver including a pattern extending in a horizontal direction, wherein a width of the image in the horizontal direction is determined so that an angle formed between two lines extending from a point in a central field to both ends of the image becomes at least twenty degrees.

3. Applicant's arguments with respect to claims 1-12 have been considered but are moot in view of the new ground(s) of rejection.
